Event Booking Calendar

Your smart online event management and booking system

Version: 4.0

The Event Booking Calendar script is an online event registration system that enables your website visitors to register for classes, training sessions, conferences, and other events directly on your website. Our PHP event booking system has a simple user interface and an administration page that gives you the ability to create customized event registration forms, collect user details, and accept payments – no coding knowledge required!

[Highlights](#)[Features](#)[Faq](#)[Download](#)

Product Highlights

Our event booking system is suitable for all companies, organizations, and artists staging different kinds of events on a regular basis. Embed our Event Booking Calendar into your website and enable visitors to book and pay online for the performances they are interested in.

[PRICING](#)[HELP](#)[LOG IN](#)

Create custom online registration forms for various events like concerts, conferences, workshops, etc. Set prices, upload images, and more.

Events can be displayed in the default calendar view, list, and monthly view. Admins can switch between 10 color schemes.

Payment Integration

Let customers make online payments using PayPal, Authorize.net, and other payment gateways. Process offline payments via credit cards and wire transfers.

Customizable Options

Design your event registration system using a number of options and formatting styles that come standard with the script.

Tickets & Pricing

Create as many different ticket types as you need. Set different prices for each ticket, add a tax percentage and specify currency.

Multiple Languages

You can easily translate all system messages and titles through the Admin Panel and enable a language bar on the front end.

Editable Booking Form

Select which fields are present in the event booking form using simple drop-down menus in the back-end system.

PHP Source Code

Get a Developer License and customize the PHP event registration system! Or, we can do it for you.

[VIEW ALL FEATURES](#)

Event Booking Calendar

Create as many events as you need

With the Event Booking Calendar, you can take event planning and online scheduling to a professional level. The script lets you create an unlimited number of events and organize them into categories. You can set up all kinds of events: concerts, workshops, training sessions, seminars, and more. Integrate each event registration form individually through a separate integration code.

SELECT TICKET TYPES THAT YOU WANT TO BUY

Tickets and prices

Create as many different types of tickets as you need and set different prices for tickets, add a tax percentage, and specify currency. With our event booking system, you can easily upload ticket templates and generate PDF tickets.

Allow cash payments

YES ☒

Label

Cash

Collect payments

Process transactions with your preferred payment method. The event registration system is integrated with PayPal and Authorize.net to help you process online payments. The booking system also collects credit card details for offline processing and will show bank account details to your clients for wire transfers. Do you need to use another payment gateway? We can add it for you. [View all payment gateways](#)

Customize as you wish

A number of options are available with the Event Booking Calendar to help you configure your own event registration system and collect the data you need. Each option is simply presented in the Admin Panel and no programming skills are required to customize the settings of the event booking script.

[PRICING](#)[HELP](#)[LOG IN](#)

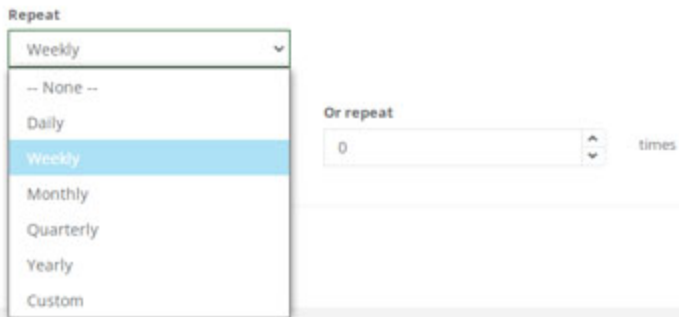

Three views, ten color themes

Website visitors can switch between list, calendar, and monthly view to see all events. Admins can change the script color scheme to match their website branding. You can preview the color schemes and allow multiple front-end views.

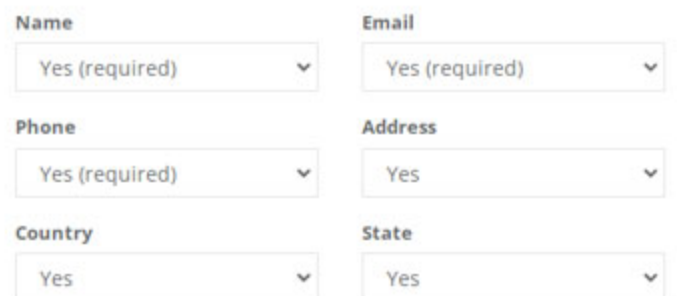

Event categories

With the event booking system, you'll get easy event management that benefits both your business and your customers. Our event management platform lets you organize events into categories to make it easy for website visitors to find the events they would like to attend.

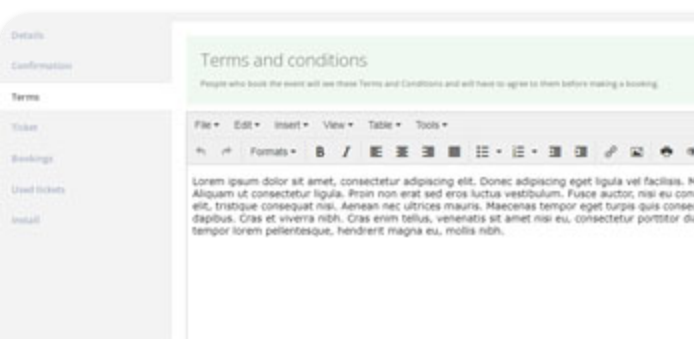

Recurring events

Create repeating events and let the event booking script handle the online registrations. Easily update the recurrence time: create events that recur daily, weekly, monthly, quarterly, yearly, or with a custom repeating time.

Customize the registration form

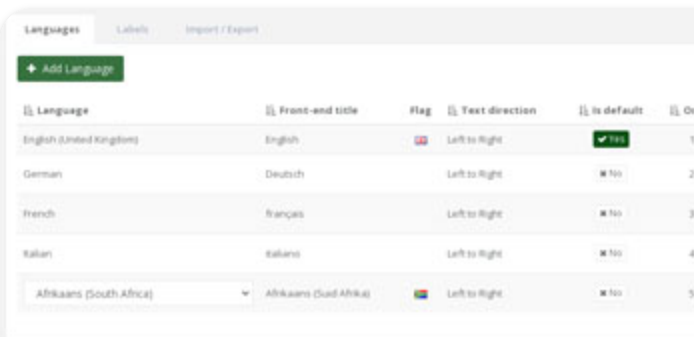

Collect user details with a custom booking form. With our event booking system, you can use simple drop-down menus to easily customize the booking form with the fields you need.

[PRICING](#)[HELP](#)[LOG IN](#)

Add your own booking terms to the registration form. The event booking script will not allow applicants to continue with the registration unless they agree with your booking terms.

The Event Booking Calendar script supports multiple currencies to make it the perfect event registration system to use on any website, anywhere in the world. Set the default currency by going to the Options page in the Admin Panel and then on the Booking tab set the currency you'd like to use.

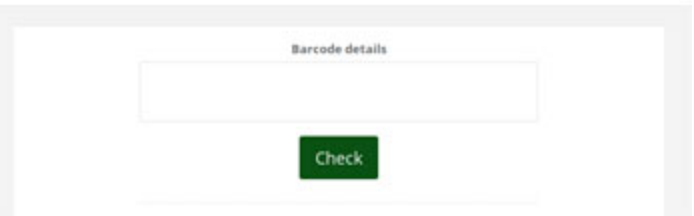

Translate your event registration system

The built-in language editor allows you to translate your online event registration system and make it available in any language. You can translate the event booking system by going to the Options page in the Admin Panel and then on the Language tab where you can edit all back-end, front-end, and system messages.

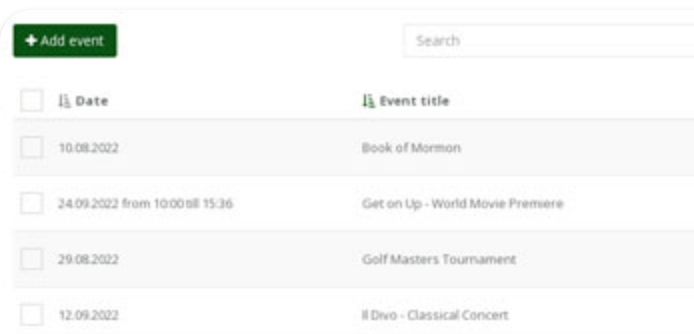

Bar code reader

Use your bar code scanner to read the barcodes and fill in the ticket ID into the text below. Then click on Check button to read ticket details and confirm it.

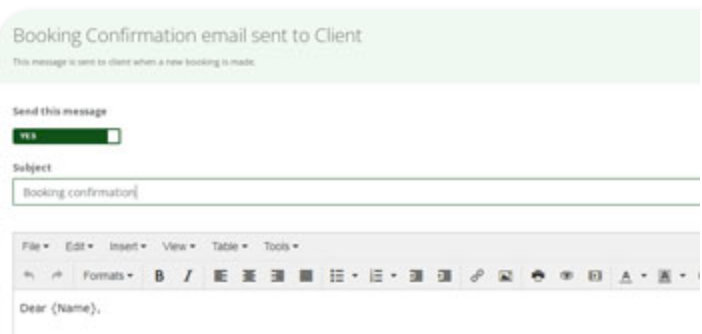

Barcode reader

You can validate tickets via the Barcode Reader by going to the Bookings page. Under the Barcode tab use your bar code scanner to insert the barcode ID, which you will find on the ticket, and check if the ticket is valid.

User-friendly admin system

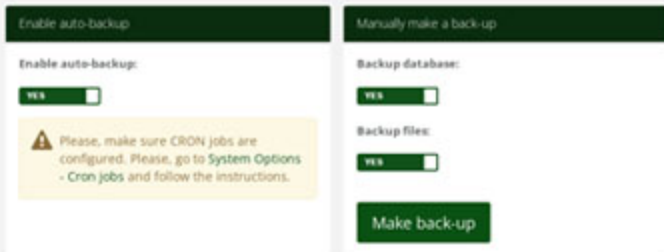

Instant SMS & email notifications

[PRICING](#)[HELP](#)[LOG IN](#)

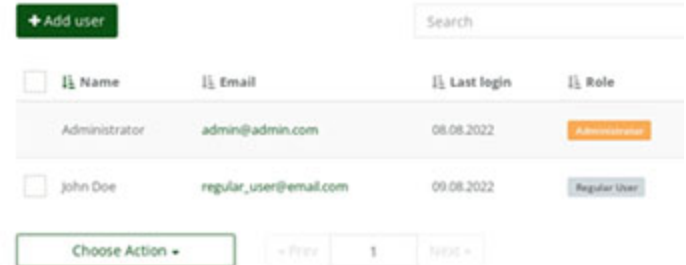

The event booking system has built-in filters and controls, advanced search, and quick editing tools to help you streamline your work.

through the event registration form. Compose personalized messages using the available information tokens and the TinyMCE text editor.

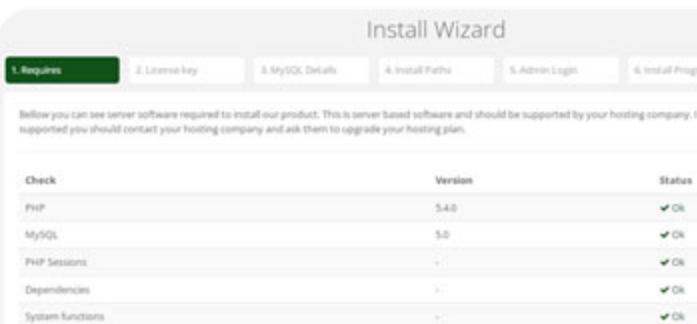

Quick and simple database backups

Log in as an administrator to the PHP event booking script's Admin Panel and make a secure copy of your entire MySQL database and files. We advise you to do this regularly so you can protect and archive all your relevant information.

User access levels

The Event Booking Calendar allows users with administrator permissions to create an unlimited number of editor users that have limited access to the event booking system's Admin Panel. Editors can only see and use certain features of the booking system and won't be able to change the main settings and options.

Easy installation

An installation wizard will automatically install the XYZ script for you. Just upload the files onto your hosting account and the wizard will start. Check out the tutorials in our [knowledge base](#) to see how easy the setup process is, with examples for

Install Code

Copy the code below and put it on your web page. It will show the front end book

```
<link href="https://demo.phpjabbbers.com/source/ebc_4/core/framework/libs/
<link href="https://demo.phpjabbbers.com/source/ebc_4/index.php?controller
<script type="text/javascript" src="https://demo.phpjabbbers.com/source/ebc_
```

Simple integration

To integrate the online event registration system into your website, just copy the JavaScript code generated on the Install page in the back end and paste it into the body of your web page. You can also integrate each event registration form

High speed and excellent performance

Our event and appointment scheduling script uses the latest PHPJabbers framework specially developed to ensure excellent performance and flawless work throughout the booking process – even with heavy databases. Watch a [video demonstration](#) of one of our scripts having one million listings added and eight million records in the database.

```
posted` int(11) NOT NULL,`edited` int(11) NOT NULL,`pagename` varchar(200) NOT NULL, 1
`eno`))";
$res = mysqli_query($link, $query);
if($res)
    echo "New MySQL table created";
}

// Delete records ?
if(isset($_POST['delete'])) {
    foreach($_POST['delete'] as $id => $value){
        // Get page name to delete
        $query = "SELECT pagename FROM $table WHERE serno = ".$id." LIMIT 1";
        $res = mysqli_query($link, $query);
        if($res) {
            $row = mysqli_fetch_row($res);
        }else echo "Could not retrieve pagename record";
        //echo $row[0];
        if($row[0] != '')
            unlink($table.$id.$row[0].".php");
    }
}
```

Developer-friendly license

If you're a web developer, you can modify the CSS, HTML, and JavaScript code of the Event Booking Calendar script on your own. Buy the Developer License and you'll receive access to the source code of our event booking software and a guide to [our framework](#). Or, we can do the custom modifications to the PHP script for you. To request a customization, just [contact us](#).

Install Wizard

Before you can use server software required to install our product, this is server-based software and should be supported by your hosting company. If any of the software below is not supported you should contact your hosting company and ask them to upgrade your hosting plan.		
Check	Version	Status
PHP	5.4.0	✔ OK
MySQL	5.5	✔ OK
PHP Sessions	1.1	✔ OK
Dependencies	1.1	✔ OK
System Functions	1.1	✔ OK

Testimonials

Let our clients share their experience with our online event booking system and how the script has improved their online business.

“

I purchased the event booking system (at an extremely reasonable price) with very little knowledge of Joomla1.5. It was customized for me very quickly and the instructions for installation

“

Just a quick note to tell you, guys, what a great experience I had with PHPJabbers. I was looking to develop a simple calendar and event booking application for a professional

vaikanov came through for me in (believe it or not) minutes. I highly recommend PHPjabbers.com.

Anthony Scipione

I wanted would require a substantial amount of modification. Also, I wanted it to work as a Joomla component. I requested a quote from PHPJabbers, got a very reasonable estimate, and agreed to go ahead. PHPJabbers team worked quickly and were in constant contact, and once the product was delivered kept working until I was completely satisfied.

Sean Glass

say now impressed we were with your scripts, your price, your speed and ability to adapt them to our requirements.

FAQ & Knowledge Base

The main thing is that your charges were both reasonable and affordable even for a small family firm like ours.
