## net: macvlan: fix memory leaks of macvlan\_common\_newlink

[ Upstream commit 23569b5652ee8e8e55a12f7835f59af6f3cefc30 ]

kmemleak reports memory leaks in macvlan\_common\_newlink, as follows:

```
ip link add link eth0 name .. type macvlan mode source macaddr add
<MAC-ADDR>
```

kmemleak reports:

```
unreferenced object 0xfffff8880109bb140 (size 64):
  comm "ip", pid 284, jiffies 4294986150 (age 430.108s)
  hex dump (first 32 bytes):
    00 00 00 00 00 00 00 00 b8 aa 5a 12 80 88 ff ff .....Z.....
    80 1b fa 0d 80 88 ff ff 1e ff ac af c7 c1 6b 6b .....kk
  backtrace:
  [<ffffffffff813e06a7>] kmem_cache_alloc_trace+0x1c7/0x300
  [<ffffffffff81b66025>] macvlan_hash_add_source+0x45/0xc0
  [<ffffffffff81b66a67>] macvlan_changelink_sources+0xd7/0x170
  [<ffffffffff81b6775c>] macvlan_common_newlink+0x38c/0x5a0
  [<ffffffffff81b6797e>] macvlan_newlink+0xe/0x20
  [<ffffffffff81d97f8f>] __rtnl_newlink+0x7af/0xa50
  [<ffffffffff81d98278>] rtnl_newlink+0x48/0x70
  ...
```

In the scenario where the macvlan mode is configured as 'source', macvlan\_changelink\_sources() will be executed to reconfigure list of remote source mac addresses, at the same time, if register\_netdevice() return an error, the resource generated by macvlan\_changelink\_sources() is not cleaned up.

Using this patch, in the case of an error, it will execute macvlan\_flush\_sources() to ensure that the resource is cleaned up.

Fixes: [aa5fd0fb7748](#) ("driver: macvlan: Destroy new macvlan port if macvlan\_common\_newlink failed.")
