Bluetooth: L2CAP: fix use-after-free in l2cap_conn_del()

[Upstream commit 0d0e2d032811280b927650ff3c15fe5020e82533]

When `l2cap_rcv_frame()` is invoked to receive data, and the `cid` is `L2CAP_CID_A2MP`, if the channel does not exist, it will create a channel. However, after a channel is created, the hold operation of the channel is not performed. In this case, the value of channel reference counting is 1. As a result, after `hci_error_reset()` is triggered, `l2cap_conn_del()` invokes the close hook function of A2MP to release the channel. Then `l2cap_chan_unlock(chan)` will trigger UAF issue.

The process is as follows:

Receive data:

```
l2cap_data_channel()
  a2mp_channel_create() --->channel ref is 2
  l2cap_chan_put() --->channel ref is 1
```

Triger event:

```
hci_error_reset()
  hci_dev_do_close()
  ...
  l2cap_disconn_cfm()
    l2cap_conn_del()
      l2cap_chan_hold() --->channel ref is 2
      l2cap_chan_del() --->channel ref is 1
      a2mp_chan_close_cb() --->channel ref is 0, release channel
      l2cap_chan_unlock() --->UAF of channel
```

The detailed Call Trace is as follows:

BUG: KASAN: use-after-free in `__mutex_unlock_slowpath+0xa6/0x5e0`
 Read of size 8 at addr `ffff8880160664b8` by task `kworker/u11:1/7593`
