| Title       | PHPGurukul Employee Record Management System V1.3 SQL Injection                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Description | During the security assessment of "Employee Record Management System", I detected a critical SQL injection vulnerability in the "editmyeducation.php" file. This vulnerability is attributed to the insufficient validation of user input for the "coursepg" parameter. This inadequacy enables attackers to inject malicious SQL queries. Consequently, attackers can access the database without proper authorization, modify or delete data, and obtain sensitive information. Immediate corrective actions are essential to safeguard system security and uphold data integrity. |
