

Have you found a vulnerability in a WordPress plugin or theme? Report vulnerabilities in WordPress plugins and themes through our [bug bounty program](#) and earn a bounty on all in-scope submissions, while we handle the responsible disclosure process on your behalf.

As a reminder, the Wordfence Intelligence Vulnerability Database API is completely free to query and utilize, both personally and commercially, and contains all the same vulnerability data as the user interface. Please review the API [documentation](#) and Webhook [documentation](#) for more information on how to query the vulnerability API endpoints and configure webhooks utilizing all the same data present in the Wordfence Intelligence user interface.

Improper Control of Generation of Code ('Code Injection')

[CVSS:3.1/AV:N/AC:L/PR:L/UI:N/S:U/C:N/I:L/A:N](#)

CVE	CVE-2024-13420
CVSS	4.3 (Medium)
Publicly Published	May 1, 2025
Last Updated	May 2, 2025
Researcher	Lucio Sá

Description

Multiple plugins and/or themes for WordPress are vulnerable to unauthorized access due to a missing capability check on several AJAX actions like 'gsf_reset_section_options', 'gsf_reset_section_options', 'gsf_create_preset_options' and more in various versions. This makes it possible for authenticated attackers, with Subscriber-level access and above, to reset and modify some of the plugin/theme settings. This issue was escalated to Envato over two months from the date of this disclosure and the issues, while partially patched, are still vulnerable.
