it ends in <i>s</i> (i.e. plurals in certain languages)', Alink_Tap::get_instance()->get_plugin_slug()) ?></p>

<p class="submit"><input type="submit" value="Submit &raquo;" /></p>

</form>

<p>Considerations:</p>

<ul>

<li>URLs should be valid (i.e. begin with http://)</li>

<li>The same URL can appear on more than one line (i.e. with more than one keyword).</li>

<li>Because a word can only link to one site, a keyword should not appear on more than one line. If
it does, only the last instance of the keyword will be matched to its URL.</li>

<li>If one of your keywords is a substring of the other--e.g. "download wordpress" and "wordpress"--
then you should list the shorter one later than the first one.</li>

<li>Keywords are case-insensitive (e.g. "wordpress" is the same as "WoRdPrEsS").</li>

<li>Spaces count, so "wordpress" is not the same as "wordpress "</li>

<li>Keywords will be linked only if they occur in your post as a word (or phrase), not as a partial
word. So if one of your keywords is "a" (for some strange reason), it will be linked only when it occurs as the
word "a"--when the letter "a" occurs within a word, it will not be linked.</li>

<li>You can use any valid target attribute, not just "_blank"--see <a
href="http://www.w3schools.com/tags/tag_a.asp">W3C</a> for a list of valid targets.</li>

</ul>

</div>

<?php if($errors) :?>
