

VDB-307347 · CVE-2025-4250 · GCVE-100-307347

CODE-PROJECTS NERO SOCIAL NETWORKING SITE 1.0 /INDEX.PHP SQL INJECTION

A vulnerability was found in code-projects Nero Social Networking Site 1.0. It has been classified as critical. This affects an unknown code block of the file `/index.php`. The manipulation of the argument `fname/lname/login/password2/cpassword/address/cnumber/email/gender/propic/month` with an unknown input leads to a sql injection vulnerability. CWE is classifying the issue as CWE-89. The product constructs all or part of an SQL command using externally-influenced input from an upstream component, but it does not neutralize or incorrectly neutralizes special elements that could modify the intended SQL command when it is sent to a downstream component. This is going to have an impact on confidentiality, integrity, and availability.

It is possible to read the advisory at github.com. This vulnerability is uniquely identified as CVE-2025-4250. The exploitability is told to be easy. It is possible to initiate the attack remotely. No form of authentication is needed for exploitation. Technical details and a public exploit are known. The attack technique deployed by this issue is T1505 according to MITRE ATT&CK.

The exploit is shared for download at github.com. It is declared as proof-of-concept. By approaching the search of `inurl:index.php` it is possible to find vulnerable targets with Google Hacking.

There is no information about possible countermeasures known. It may be suggested to replace the affected object with an alternative product.

The entries VDB-291475, VDB-292526, VDB-294010 and VDB-295172 are pretty similar.
