Release notes (3.1.0)

Fixed three vulnerabilities identified by the [Santander Portugal Cybersecurity Team](#):

1. The **Allowed File Extensions** are now validated both on *client-side* and *server-side*, being stored on a **Session Variable** instead of a input parameter to the **File Process URL**;
2. The **Upload File Size Limit** is now validated both on *client-side* and *server-side*, being stored on a **Session Variable**;
3. The built-in **File Process URL** can now be secured to be accessed only by **Registered Users**, by setting the **AllowAnonymousUpload Site Property** to **False**.

★★★★★

by [Duarte Silva](#) 2024-01-02 in version 3.0.3

This component proves to be highly useful, notwithstanding the fact that our team discovered a vulnerability related to XSS (cross-site scripting). Consequently, we implemented an update on the ProcessFiles screen to enhance the security, as described below.

-Then we encoded the output URL from SanitizeHTML action.
[qqfile = EncondeURL(SanitizeHtml.SanitizedHtml)]

This was made in the beginning of the preparation action and the vulnerability was resolved.

I hope this helps!

Answer from the owner2024-01-16in version 3.0.3

Thank you for addressing this issue Duarte. A new version has been released where we have implemented your solution.

by Lourenço Matalonga2023-06-14in version 3.0.3

Great component and works perfectly. Easy to understand how to properly use it too. Good job.

by Negin Nafissi2022-01-03in version 3.0.3

Great component with clear documentation!
