CVE-2025-45236 - DBSyncer v2.0.6: Stored Cross-Site Scripting (XSS)
1
2
     Vulnerability Type: Stored XSS
     Attack Vector: Nickname field in the user profile
 3
 4
 5
     Reproduction Steps:
 6
7
     Log in to the DBSyncer web application as a valid user.
8
9
     Navigate to the top-right section and click on "Edit Profile".
10
     Locate the "Nickname" field and inject the following payload:
11
12
13
     <script>alert('XSS');</script>
     Save the changes.
14
15
     Refresh the page or visit any part of the site where the nickname is displayed.
16
17
     Result: The JavaScript payload is executed in the victim's browser session, demonstrating a persiste
18
19
20
     Impact: Allows attackers to execute arbitrary JavaScript in the context of other users, potentially
```
