# Cisco IOS XE Software for Cisco ASR 903 Aggregation Services Routers ARP Denial of Service Vulnerability

Advisory ID: cisco-sa-asr903-rsp3-arp-dos-WmfzdvJZ

First Published: 2025 May 7 16:00 GMT

Version 1.0:

Workarounds: No workarounds available

Cisco Bug IDs: CVE-2025-20189 CWF-762

CVSS Score:

Base 7.4 📵

Download CSAF Email

## Summary

 $A \ vulnerability \ in \ the \ Cisco \ Express \ Forwarding \ functionality \ of \ Cisco \ IOS \ XE \ Software \ for \ Cisco \ ASR \ 903 \ Aggregation \ Services \ Routers \ with \ Routers \ Rou$ Route Switch Processor 3 (RSP3C) could allow an unauthenticated, adjacent attacker to trigger a denial of service (DoS) condition.

This vulnerability is due to improper memory management when Cisco IOS XE Software is processing Address Resolution Protocol (ARP) messages. An attacker could exploit this vulnerability by sending crafted ARP messages at a high rate over a period of time to an affected device. A successful exploit could allow the attacker to exhaust system resources, which eventually triggers a reload of the active route switch processor (RSP). If a redundant RSP is not present, the router reloads.

Cisco has released software updates that address this vulnerability. There are no workarounds that address this vulnerability.

This advisory is available at the following link:

https://sec.cloudapps.cisco.com/security/center/content/CiscoSecurityAdvisory/cisco-sa-asr903-rsp3-arp-dos-WmfzdvJZ

This advisory is part of the May 2025 release of the Cisco IOS and IOS XE Software Security Advisory Bundled Publication. For a complete list of the advisories and links to them, see Cisco Event Response: May 2025 Semiannual Cisco IOS and IOS XE Software Security Advisory Bundled Publication.

#### Affected Products

#### **Vulnerable Products**

This vulnerability affects Cisco ASR 903 Aggregation Services Routers with RSP3C if they are running a vulnerable release of Cisco IOS XE Software, regardless of device configuration

For information about which Cisco software releases are vulnerable, see the Fixed Software section of this advisory.

## Products Confirmed Not Vulnerable

Only products listed in the <u>Vulnerable Products</u> section of this advisory are known to be affected by this vulnerability.

Cisco has confirmed that this vulnerability does not affect the following Cisco products:

- IOS Software
- · IOS XE Software if it is running on devices other than Cisco ASR 903 Aggregation Services Routers with RSP3C
- · IOS XR Software
- Meraki products
- NX-OS Software

## Indicators of Compromise

Customers can monitor the RSS memory usage of the uea\_mgr process by viewing the output of the show process memory platform sorted | include RSS|uea\_mgr command. Under normal circumstances, RSS memory usage of the uea\_mgr process is around 1 GB (1,048,576 bytes), as shown in the following example:

	louter#	show pro	ocess memor	ry platf	orm sorted	include RS	SS uea_mgr
2366 1525 948416 136 71969 948416 uea mai	Pid	Text	Data	Stack	Dynamic	RSS	Name
2500 1525 540410 150 71500 540410 ucd_mg/	2366	1525	948416	136	71960	948416	uea_mgr
Router#	Router#	ŧ					

If the RSS memory usage of the *uea\_mgr* process goes well beyond 1,048,576 bytes, this could be an indication of exploitation of this vulnerability. Unexpected RSP reloads have been observed when the RSS memory usage of the *uea\_mgr* process reached around 1.7 GB (1,782,580 bytes).

### Workarounds

There are no workarounds that address this vulnerability.

However, to avoid unexpected reloads as a result of successful exploitation of this vulnerability, customers can monitor the RSS memory usage of the *uea\_mgr* process as described in the *Indicators of Compromise* section of this advisory. Customers can then schedule a planned reload of the RSP before the memory usage reaches a critical level.

While this mitigation has been deployed and was proven successful in a test environment, customers should determine the applicability and effectiveness in their own environment and under their own use conditions. Customers should be aware that any workaround or mitigation that is implemented may negatively impact the functionality or performance of their network based on intrinsic customer deployment scenarios and limitations. Customers should not deploy any workarounds or mitigations before first evaluating the applicability to their own environment and any impact to such environment.

### ∧ Fixed Software

Cisco has released <u>free software updates</u> that address the vulnerability described in this advisory. Customers with service contracts that entitle them to regular software updates should obtain security fixes through their usual update channels.

Customers may only install and expect support for software versions and feature sets for which they have purchased a license. By installing, downloading, accessing, or otherwise using such software upgrades, customers agree to follow the terms of the Cisco software license: <a href="https://www.cisco.com/c/en/us/products/end-user-license-agreement.html">https://www.cisco.com/c/en/us/products/end-user-license-agreement.html</a>

Additionally, customers may only download software for which they have a valid license, procured from Cisco directly, or through a Cisco authorized reseller or partner. In most cases this will be a maintenance upgrade to software that was previously purchased. Free security software updates do not entitle customers to a new software license, additional software feature sets, or major revision upgrades.

The <u>Cisco Support and Downloads page</u> on Cisco.com provides information about licensing and downloads. This page can also display customer device support coverage for customers who use the My Devices tool.

When <u>considering software upgrades</u>, customers are advised to regularly consult the advisories for Cisco products, which are available from the <u>Cisco Security Advisories page</u>, to determine exposure and a complete upgrade solution.

In all cases, customers should ensure that the devices to be upgraded contain sufficient memory and confirm that current hardware and software configurations will continue to be supported properly by the new release. If the information is not clear, customers are advised to contact the Cisco Technical Assistance Center (TAC) or their contracted maintenance providers.

### Customers Without Service Contracts

Customers who purchase directly from Cisco but do not hold a Cisco service contract and customers who make purchases through third-party vendors but are unsuccessful in obtaining fixed software through their point of sale should obtain upgrades by contacting the Cisco

TAC: <a href="https://www.cisco.com/c/en/us/support/web/tsd-cisco-worldwide-contacts.html">https://www.cisco.com/c/en/us/support/web/tsd-cisco-worldwide-contacts.html</a>

Customers should have the product serial number available and be prepared to provide the URL of this advisory as evidence of entitlement to a free upgrade.

#### Cisco IOS and IOS XE Software

To help customers determine their exposure to vulnerabilities in Cisco IOS and IOS XE Software, Cisco provides the Cisco Software Checker. This tool identifies any Cisco security advisories that impact a specific software release and the earliest release that fixes the vulnerabilities that are described in each advisory ("First Fixed"). If applicable, the tool also returns the earliest release that fixes all the vulnerabilities that are described in all the advisories that the Software Checker identifies ("Combined First Fixed").

To use the tool, go to the <u>Cisco Software Checker</u> page and follow the instructions. Alternatively, use the following form to determine whether a release is affected by any Cisco Security Advisory. To use the form, follow these steps:

- Choose which advisories the tool will search-only this advisory, only advisories with a Critical or High <u>Security Impact Rating (SIR)</u>, or all advisories.
- 2. Enter a release number-for example, 15.9(3)M2 or 17.3.3.

3. Click Check.

Enter release number Check

A Exploitation and P

# Exploitation and Public Announcements

The Cisco Product Security Incident Response Team (PSIRT) is not aware of any public announcements or malicious use of the vulnerability that is described in this advisory.

### Source

This vulnerability was found during the resolution of a Cisco TAC support case.
