 **github-actions** released this 2 days ago · [13 commits](#) to 5.x since this release  5.7.5  679b82e 

- Return URLs are now sanitized before being saved to the PHP session.
- `craft\services\Entries::getEntryTypeById()` now has a `$withTrashed` argument.
- Fixed a bug where admin tables' pagination footers could be positioned incorrectly in slideouts. ([#17187](#))
- Fixed a SQL error that could occur when running garbage collection. ([#17197](#))
- Fixed a PHP error that could occur if malformed UTF-8 data was passed to `craft\helpers\StringHelper::replaceMb4()`. ([#17202](#))
- Fixed a bug where "Applying new propagation method" jobs weren't propagating elements to newly-supported sites. ([#17207](#))
- Fixed a bug where `_includes/forms/button.twig` wasn't rendering labels set to `'0'`. ([#17225](#))
- Fixed a bug where Icon fields and icon selectors within option field settings weren't remembering `0` icon selections.
- Fixed a bug where relational fields weren't enforcing their "Maintain hierarchy" and "Branch Limit" settings on save.
- Fixed a bug where eager-loading relational field elements wasn't always working, if multiple fields were aliased to the same handle.
- Fixed an error that could occur when applying project config changes after running the `entry-types/merge` command, if the outgoing entry type was used by a Single section. ([#16628](#))
- Fixed a bug where `resave/*` commands could end prematurely if an unexpected error occurred.
- Fixed a bug where Matrix fields weren't always loading nested entries in the control panel. ([#17213](#))
- Fixed a bug where GraphQL queries could return unexpected results. ([#17160](#))

- Fixed a bug where Card Attributes settings weren't always remembering custom field selections, for fields that were just added to the field layout designer. ([#17223](#))
