Open Redirect Vulnerability in Kanaries

Vendor Homepage: https://kanaries.net/

Poc Video: https://drive.google.com/file/d/1kqfbmx1W6UgSs56gOLOsUFiGcVkrfyW9/view?usp=sharing

Step-by-Step Exploitation Guide

1. Go to the Website

Navigate to the Kanaries website.

2. Initiate Login/Sign Up

- Click on the **"Log in / Sign up"** button on the homepage.
- This redirects you to:https://kanaries.net/access?redirect_path=https%3A%2F%2Fkanaries.net%2Fhome

3. Modify the Redirect Parameter

- Change the `redirect_path` parameter to a malicious site, such as: https://kanaries.net/access?redirect_path=https%3A%2F%2Fbing.com

4. Trigger the Redirect

- Click on **"Login With GitHub"** or **"Login With Google"** to initiate the login process.

- Instead of being redirected back to the intended page (`kanaries.net`), you are redirected to `bing.com` (or any malicious URL specified in the `redirect_path` parameter).
