

Submit #524676: code-projects payroll-management-system-in-php v1.0 sql injection

Title code-projects payroll-management-system-in-php v1.0 sql injection

Description An unrestricted SQL injection attack exists in payroll-management-system in add_employee.php. The parameters that can be controlled are as follows: \$lname. This function executes the id parameter into the SQL statement without any restrictions. A malicious attacker could exploit this vulnerability to obtain sensitive information in the server database.
