A vulnerability classified as problematic has been found in YouDianCMS 9.5.21. This affects some unknown processing of the file `/App/Tpl/Admin/Default/Log/index.html`. The manipulation of the argument `UserName/LogType` with an unknown input leads to a cross site scripting vulnerability. CWE is classifying the issue as CWE-79. The product does not neutralize or incorrectly neutralizes user-controllable input before it is placed in output that is used as a web page that is served to other users. This is going to have an impact on integrity.

The advisory is shared at [github.com](https://github.com). This vulnerability is uniquely identified as CVE-2025-3531. The exploitability is told to be easy. It is possible to initiate the attack remotely. No form of authentication is needed for exploitation. It demands that the victim is doing some kind of user interaction. Technical details and a public exploit are known. MITRE ATT&CK project uses the attack technique T1059.007 for this issue.

The exploit is shared for download at [github.com](https://github.com). It is declared as proof-of-concept. The vendor was contacted early about this disclosure but did not respond in any way. By approaching the search of `inurl:App/Tpl/Admin/Default/Log/index.html` it is possible to find vulnerable targets with Google Hacking.

There is no information about possible countermeasures known. It may be suggested to replace the affected object with an alternative product.

The entries VDB-202129, VDB-202130, VDB-202131 and VDB-258778 are related to this item.
